- **Premier Hair Care: The Very Best**

Premier Shampoo, Premier Hair Conditioner

- **Other Essentials**

Premier Shaving Gel, Premier Deodorant Spray, Premier Liquid Soap, Premier Pain Relief Cream

**Premier Body Care For  
Men, Women and Children**

## **Cancer-Causing Agents in Your Shampoo?**

Have you ever thought about what's in your body care products (such as skin care, hair care, soap, deodorant, shaving cream, etc.)? Research shows that many common body care products are loaded with toxic chemicals, even cancer-causing agents.

For example, sodium lauryl sulfate (SLS), a harsh soap found in almost every commercial shampoo, is a known mutagen which can disrupt the DNA in your cells. For some people, that means it could initiate cancer. It's hard to believe you may have used SLS for years.

After testing hundreds of products, we have found that the majority of body care products contain many toxic chemicals. Many of these chemicals are questionable at best and some are proven carcinogens (cancer-causing agents). Get these toxics out of your home and your life. For the first time, truly elegant, 100% non-toxic, super healthy body care products are now available: Premier skin and hair care.

## **What You Put On Your Skin, You Are Eating**

What you put on your skin, you are literally eating since your skin and mucus membranes can absorb the ingredients into your body. Many chemical additives (such as solvent residues) are cumulative in the body. As your body bio-accumulates these toxins over time, further health crises may occur. For best health, stop using commercial body care products: almost all of them contain toxic ingredients which are hazardous to your health.

## **The Good Does Not Make Up For The Bad**

We routinely test skin and hair care products as well as other body care products for our patients. Although a product may contain

some good ingredients, these do NOT make up for the toxic ones, such as those listed on our Toxic 8 Hit List. See the chart which lists the 8 chemicals on our "most wanted" list -- the 8 chemicals which we most want to see OFF labels of body care products. Read over the list and avoid these harmful, bio-cumulative chemicals. You may be surprised to find that even so-called "natural" products are full of these toxic chemicals.

## **Hello, Beautiful**

Do you want a radiant complexion -- or to eliminate wrinkles -- or problem skin? Rule Number One is to STOP using products which contain toxic chemicals. Throw them out; do not be tempted to use them up to try to save money. Instead, save your looks and your health!

Toxic chemicals contained in common skin care products can be readily absorbed through your skin, placing increased toxic stress on your skin. This is NOT the road to radiant good looks or health.

We have spent many hours testing body care products from all over the U.S. as well as from foreign countries, many claiming to be "natural" and "nontoxic." Beware of products labelled "natural," a great advertising word designed to entice you to buy. The overwhelming majority of these so-called "natural" products tested quite toxic. Since there are no legal regulations, anyone can call their product "natural," regardless of its contents.

We found the use of cheap, toxic ingredients in commercially made products almost universal, even in the supposedly "better" brands. Rather than compromise by using the least toxic products, we decided to make our own body care products, using 100% choice ingredients with absolutely NO toxics at all.

\*This statement has not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

# Premier Body Care

For superior health, switch to nontoxic body care products. Stop bio-accumulating the cheap solvents used by commercial product makers. Once the techno-toxic residues found in shampoo, skin cream or a shave cream enter your circulation via the skin, you may pay the price for years to come with these health-destroying agents.

These chemicals can interfere with how your organs function, imbalance your hormones, even mutate normal cells into unhealthy ones. It's time for first-class, super healthy body care products: Premier skin and hair care.

## 1. Premier Skin Care (For Men and Women)

Our Premier Skin Care line is a unique, 100% nontoxic, one-of-a-kind, advanced system. It is based on the amazing ECOPs; these are beneficial, electromagnetically charged, organic herbal particles. These highly charged, pre-digested nutrients actually feed your skin to help quickly rebuild radiant skin. Commercial products temporarily plump up your skin via questionable, even toxic chemicals. ECOPs also eliminate the need for toxic preservatives. The 5 products of the Skin Care Line work best as an integrated system: Facial Cleanser, Facial Tonic, Skin Serum, Lipid Complex, Colostrum Cream and Rejuvenation Cream. Any product can also be used alone.

## 2. Premier Hair Care (For Men and Women)

Our Premier Hair Care is the ultimate in 100% nontoxic, truly elegant hair products. Premier Shampoo and Premier Hair Conditioner contain highly charged, nutrient-rich particles, called ECOPs. They eliminate the need for harsh detergents or toxic preservatives typically found in other hair products. Our one-of-a-kind, advanced Hair Care system thoroughly cleanses your scalp and hair follicles for more robust circulation and oxygenation. Many people have noticed less falling hair in just 3 weeks, leaving hair soft and manageable.

## 3. Premier Deodorant Spray (For Men and Women)

We have received rave reviews on our easy-to-spray, highly effective, 100% nontoxic Premier Deodorant Spray. It contains ECOPs, the highly charged herbal particles, which actually nourish your under-arm area as well as promoting odor control. Get long-lasting daily protection -- without toxic chemicals such as aluminum compounds, propylene glycol, and parabens typically found in deodorants and anti-perspirants. The gentle pleasant fragrance of Premier Deodorant Spray is from real herbal extracts, *not* synthetic fragrances out of a test tube. Our product uses a pump spray, rather than the pressurized sprays which contain chemicals harmful to the environment. You'll love this product!

## 4. Premier Shaving Gel (For Men and Women)

Don't shave another single hair off your face, legs, or underarms until you've tried 100% nontoxic Premier Shaving Gel. With highly polarized, charged herbal particles as its base, our shaving gel cleans and rejuvenates your skin, giving you the best shave you've ever had. No more irritated skin, nicks, scratches or razor burns. It helps to plump, tone, tighten skin and normalize pore size. Avoid toxic store-bought shaving creams which contain questionable, toxic chemicals that are hard to pronounce and age your skin. Get the best: Premier Shaving Gel. You'll never switch!

## 5. Premier Liquid Soap (For hands or body)

Tired of worrying about the chemicals in store-bought soaps? Soaps commonly contain sodium lauryl sulfate, a cheap, harsh detergent which can degenerate your skin and hair as well as contribute to hair loss and eye damage. Premier Liquid Soap is a refreshing, healthy change. It is 100% nontoxic with rich herbal nutrients called ECOPs (charged organic particles). Tough on dirt and grime, but super-gentle to your hands. Great for daily use, for men, women and children.

## 6. Premier Pain Relief Cream

This break-through in nontoxic body creams helps improve blood flow immediately. It contains zeolite, a special, micro-fine mineral powder, with maximum detox capacity. When applied to your skin, it helps to maintain or re-establish energetic tissue-nerve flow. When the body's energetic pathways are open again, pain will vanish. This is another one of our most raved about products.

## Eight Chemicals In Skin & Hair Care Products You Should Never Use

Listed below are the 8 chemicals on the "most wanted" list -- the 8 chemicals we most want to see OFF labels of skin and hair care products. Avoid these harmful, toxic chemicals. It's time for first class, super healthy skin and hair care products: Premier Skin and Hair Care.

### 1. Fragrance

When the word "fragrance," is listed on a label, it means a synthetic fragrance made in a test tube from any of over 200 synthetic chemicals. These "fragrance" chemicals, which can bio-accumulate in your organs, can cause many symptoms, such as headaches, lung problems, skin irritation, dizziness, memory impairment, rash, hyperpigmentation, vomiting, even potential brain damage and more. They are very cheap, toxic imitations of real herbal scents.

### 2. Propylene Glycol

This is a cheap synthetic petrochemical used as an emulsifying base in creams and lotions to make the skin look smooth, but ultimately it ages the skin faster. The Material Safety Data Sheet tells you to avoid skin contact with it because it's a skin irritant! It can denature the skin's protein, leading to poor, saggy skin. It can be absorbed through your skin and potentially cause allergic reactions, and liver and kidney damage.

### 3. Mineral Oil

This cheap, petroleum-based oil clogs the skin's pores and enlarges them, leading to poor, saggy skin. It decreases the ability of the skin cells to exchange nutrients and waste products. Those allergic to petroleum products may develop skin irritations.

### 4. Sodium Lauryl Sulfate (SLS)

This harsh, caustic detergent is used because it's cheap and suds well. It's used as an engine degreaser and garage floor cleaner but you'll also find it in shampoo, soap, facial cleanser, etc.

Research shows that SLS has a degenerative effect on the cell membranes and denatures protein such as in hair or skin. This can damage skin or hair, leading to aged skin and poor hair. SLS can corrode hair follicles and inhibit hair growth, contributing to hair loss.

SLS has the potential to cause cataracts (through skin absorption, even without direct eye contact). SLS can denature the protein of the eyes and delay the healing time of the eyes.

From skin contact, SLS can be absorbed into your circulation and concentrate in your organs, such as your heart, liver or brain. This is potentially dangerous since SLS is a mutagen, capable of changing the information in the genetic material of your cell and organs. For some people, this means it could initiate cancer.

### 5. Parabens (Propyl, Methyl, Butyl, or Ethyl)

These cheap preservatives are used to inhibit microbial growth in skin care or hair products even though they are known to be highly toxic. They have caused many allergic reactions and skin reactions.

### 6. Imidazolidinyl and Diazolidinyl Urea

These are the most commonly used preservatives after the parabens. They are an established cause of contact dermatitis (American Academy of Dermatology) and release formaldehyde which is toxic.

### 7. Synthetic Colors

Synthetic colors are used in a skin cream or shampoo to make it colorful. Avoid them at all costs, along with hair dyes (with the exception of some henna products). Synthetic colors are labeled as FD&C or D&C, followed by a number and color. Synthetic colors are believed to be cancer-causing agents.

### 8. Triethanolamine (TEA)

Often used in the base of a product and to adjust the pH. TEA causes allergic reactions including eye problems, dryness of hair and skin, and can be toxic if absorbed into the body over time.
